**Listing of Claims:**

1. (previously presented) A coupling device for attaching to an anchor member, the coupling device comprising:
  - a frame defining a mouth configured to receive the anchor member;
  - a lever having a distal end, the lever being movably mounted to said frame at a mounting location and having an open position to allow the anchor member to be received within the mouth and a closed position to retain the anchor member within the mouth;
  - a biasing member urging the lever toward the closed position; and
  - wherein the lever includes a manipulation portion between the distal end of the lever and the mounting location, and wherein a user applies a direct pushing force to the manipulation portion in order to move the lever into a lever void defined by the frame to move the lever to the open position.
2. (original) The coupling device of claim 1 wherein the lever pivots about a mounting member provided on said frame moving between said closed position and said open position.
3. (previously presented) The coupling device of claim 2 wherein the distal end substantially covers the mouth in the closed position.
- 4 (previously presented) The coupling device of claim 3 wherein the lever has a proximal end opposite the distal end of the lever and wherein the mounting member mounts the lever to the frame substantially toward the proximal end of the lever.
5. (withdrawn) The coupling device of claim 2 wherein the mounting member mounts the lever to the frame at a point between the distal end and the proximal end of the lever.
6. (original) The coupling device of claim 3 wherein the biasing member acts between the frame and the lever to urge the lever into the closed position.

7. (withdrawn) The coupling device of claim 1 wherein the biasing member acts between the frame and the proximate end of the lever to urge the lever into the closed position.

8. (previously presented) The coupling device of claim 3 wherein the biasing member acts between the frame and a point between the proximal end and the distal end of the lever to urge the lever into the closed position.

9. (withdrawn) The coupling device of claim 1 wherein the biasing member acts between the frame and the distal end of the lever to urge the lever into the closed position.

10. (original) The coupling device of claim 1 wherein the biasing member is a spring.

11. (original) The coupling device of claim 1 further comprising a cover.

12. (original) The coupling device of claim 1 further comprising a cover formed in a recognizable shape.

13. (original) The coupling device of claim 1 further comprising a cover formed in a recognizable shape resembling at least a portion of an animal's body.

14. (original) The coupling device of claim 1 further comprising a cover formed in a recognizable shape resembling an animal's head having a mouth configured to receive the anchor member and having ears configured to be gripped by a user.

15. (original) The coupling device of claim 1 further comprising a cover formed in a recognizable shape resembling a dog's head, wherein the dog's head is selected from the group consisting of a Labrador retriever, a Golden retriever, a Beagle, a German shepherd, a Dachshund, a Yorkshire terrier, a Boxer, a Poodle, a Shih Tzu, a Chihuahua, a Schnauzer, a Pug, a Pomeranian, a Cocker spaniel, a Rottweiler, a Greyhound, a Great Dane, a Saint Bernard, a Collie, a Mixed breed, a Cross breed, a Mongrel, and a Mutt.

16. (original) The coupling device of claim 1 further comprising a cover formed in a recognizable shape resembling the head of a fictional character, the head having a mouth configured to receive the anchor member and having ears configured to be gripped by a user.

17. (original) The coupling device of claim 16 wherein the fictional character is chosen from the group consisting of amusement park characters, cartoon characters, comic book characters, movie characters, literary characters, and TV characters.

18. (original) The coupling device of claim 1 further comprising an anchorage carried by the frame.

19. (original) The coupling device of claim 18 wherein the anchorage is detachable from the coupling device.

20. (original) The coupling device of claim 18 wherein the anchorage is movable.

21. (original) The coupling device of claim 1 further comprising an anchorage carried by the frame and an elongated member coupled to the anchorage.

22. (original) The coupling device of claim 21 wherein the elongated member is a leash.

23. (original) The coupling device of claim 1 further comprising a cover, wherein the cover snaps onto the frame.

24. (original) The coupling device of claim 1 further comprising a cover, wherein the cover is attached to the frame by a fastener.

25. (original) The coupling device of claim 1 further comprising a cover, wherein the frame and the cover comprise a unitary device.

26. (original) The coupling device of claim 1 further comprising a cover having a sound chip.

27. (original) The coupling device of claim 1 further comprising a cover having an illumination device.

28. (original) The coupling device of claim 1 further comprising a cover formed in the shape of a head, at least a portion of the head being configured to be gripped by a user.

29. (original) The coupling device of claim 1 further comprising a cover formed in a recognizable shape resembling a dog's head, wherein the dog's head is selected from the group consisting of a Labrador retriever, a Golden retriever, a Beagle, a German shepherd, a Dachshund, a Yorkshire terrier, a Boxer, a Poodle, a Shih Tzu, a Chihuahua, a Schnauzer, a Pug, a Pomeranian, a Cocker spaniel, a Rottweiler, a

Greyhound, a Great Dane, a Saint Bernard, a Collie, a Mixed breed, a Cross breed, a Mongrel, and a Mutt.

30. (original) The coupling device of claim 1 wherein the lever is substantially S-shaped.

31. (original) A coupling device for attaching to an anchor member, the coupling device comprising:

a housing formed to resemble the head of a mammal, the head including anatomically representative protrusions and defining a mouth configured to receive the anchor member;

a lever movably mounted relative to said housing and having an open position to allow the anchor member to be received within the mouth and a closed position to retain the anchor member within the mouth;

a biasing member urging the lever toward the closed position; and

the lever including a direct manipulation portion configured to move the lever between the closed position and the open position.

32. (Currently amended) The coupling device of claim 31, wherein the housing resembles the head of a dog selected from the group consisting of an Aberdeen Terrier, an Affenpinscher, an Afghan Hound, an African Lion Hound, an African Wild Dog, an Aidi, an Ainu, an Airedale Terrier, an Akita, an Alaskan Malamute, an Alsatian, an American Black and Tan Coonhound, an American Bulldog, an American Cocker Spaniel, an American Foxhound, an American Pit Bull, an American Pit Bull Terrier, an American Staffordshire Terrier, an American Toy Terrier, an Anglo-Francais, de Petite Vénerio, an Appensell Mountain Dog, an Appenzeller Sennenhund, an Arabian Greyhound, an Arctic Fox, an Arctic Husky, an Argentinian Grey Fox, an Argentinian Mastiff, Artesian Norman Bassett, an Australian Cattle Dog, an Australian Kelpie, an Australian Queensland Heeler, an Australian Shepherd, an Australian Terrier, an Austrian Pinscher, an Auvergne Pointer, an Azawakh Hound, a Balkan Hound, a Balkasaki Gonic, a Barb, a Barbet, a Barbone, a Basenji, a Bas Rouge, a Basset Artésian Norsmand, Basset Bleu de Gascogne, a Basset Fauve de Bretagne, a Basset Hound, a Bavarian Mountain Hound, a Bayrischer Gebirgsschweisshund, a Beagle, a Bearded Collie, a Beauceron, a Bedlington Terrier, a Belgian Cattle Dog, a Belgian
